Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

Art Unit: 1634

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: The present invention is directed to a method for determining an affinity of a first nucleobase-containing sequence for a second nucleobase-containing sequence, the method comprising:

a) providing a test medium containing the first nucleobase-containing sequence and the second nucleobase-containing sequence, wherein the first nucleobase-containing sequence and the second nucleobase-containing sequence are of different lengths;

b) applying a voltage across the test medium;

c) measuring a test electric current through the test medium; and

d) determining the affinity by evaluating whether the test electric current is equivalent to a reference electric current of a reference medium containing any size of the first nucleobase-containing sequence and the second nucleobase-containing sequence.

Although U.S. Patent No. 6,265,170 B1 teaches a method for determining an affinity of a first nucleobase-containing sequence for a second nucleobase-containing sequence, the method comprising:

a) providing a test medium containing the first nucleobase-containing sequence and the second nucleobase-containing sequence, wherein the first nucleobase-containing sequence and the second nucleobase-containing sequence are of different lengths;

b) applying a voltage across the test medium;

Art Unit: 1634

c) measuring a test electric current through the test medium; and

d) determining the affinity by evaluating whether the test electric current is equivalent to a reference electric current of a reference medium containing any size of the first nucleobase-containing sequence and the second nucleobase-containing sequence, U.S. Patent No. 6,265,170 B1 is not a prior art in view of the terminal disclaimer submitted by the applicant on February 25, 2003.

In view of the absence of either teaching or suggestion of such a method for determining an affinity of a first nucleobase-containing sequence for a second nucleobase-containing sequence, the method comprising:

a) providing a test medium containing the first nucleobase-containing sequence and the second nucleobase-containing sequence, wherein the first nucleobase-containing sequence and the second nucleobase-containing sequence are of different lengths;

b) applying a voltage across the test medium;

c) measuring a test electric current through the test medium; and

d) determining the affinity by evaluating whether the test electric current is equivalent to a reference electric current of a reference medium containing any size of the first nucleobase-containing sequence and the second nucleobase-containing sequence, U.S. Patent No. 6,265,170 B1 is not a prior art in view of the terminal disclaimer submitted by the applicant on February 25, 2003, the present invention is novel and non-obvious.

Art Unit: 1634

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
